

TFT-Display Datenblatt

Modell LM215WF3-SDB1

Kurzdaten

Hersteller LG Display

Diagonale 21,5" / 54,6 cm

Format wide

Auflösung 1920 x 1080

Backlight LED / 365 cd/m²

Interface RGB Touchscreen nein

Temperatur 0... +50°C (Betrieb)

1. General Description

LM215WF3 is a Color Active Matrix Liquid Crystal Display with Light Emitting Diode (White LED) backlight system without LED driver. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. It has a 21.5inch diagonally measured active display area with Full HD resolution (1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10bit gray scale signal for each dot, thus, presenting a palette of more than 16M colors with FRC (Frame Rate Control).

It has been designed to apply the 8bit 4Lane Display port interface.

It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

[Figure 1] Block diagram

General Features

| Active Screen Size | 21.46 inches(545.22mm) diagonal |
|------------------------|---|
| Outline Dimension | 495.6(H) x 305.25(V) x 14.8(D) mm(Typ.) |
| Pixel Pitch | 0.2475mm x 0.2475mm |
| Pixel Format | 1920 horiz. By 1080 vert. Pixels RGB stripes arrangement |
| Color Depth | 8-bit, 16,777,216 colors |
| Luminance, White | 365 cd/m ² (5point Avg.) |
| Viewing Angle(CR>10) | View Angle Free (R/L 178(Typ.), U/D 178(Typ.)) |
| Power Consumption | Total 46.7 Watt (Max.) (7.5 Watt @VLCD, Max 39.2 Watt_ Duty 100% of DC 350 mA_ w/o driver) |
| Weight | 2100g (typ.) |
| Display Operating Mode | Transmissive mode, normally black |
| Surface Treatment | Hard coating(2H), Glare (Low Reflection treatment of the front polarizer) |

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Valu | ies | Units | Notes | |
|----------------------------|----------|------|-----|--------|-------------|--|
| Parameter | Syllibol | Min | Max | Offics | | |
| Power Input Voltage | VLCD | -0.3 | 14 | Vdc | at 25 ± 2°C | |
| Operating Temperature | Тор | 0 | 50 | °C | | |
| Storage Temperature | Тѕт | -20 | 60 | °C | 1 | |
| Operating Ambient Humidity | Нор | 10 | 90 | %RH | 1 | |
| Storage Humidity | Hst | 10 | 90 | %RH | | |

Note.

- 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C Max, and no condensation of water.
- 2. Storage condition is guaranteed under packing condition.

[Figure 2] Temperature and relative humidity

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the WLED.

Table 2-1. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | Values | | | Unit | Notes |
|-------------------------------|--------|--------|------|------|-------|-------|
| rarameter | | Min | Тур | Max | Offic | Notes |
| MODULE: | | | | | | |
| Power Supply Input Voltage | VLCD | 11.4 | 12.0 | 12.6 | Vdc | |
| Permissive Power Input Ripple | VRF | - | - | 400 | mV | |
| Dower Supply Input Current | ILCD | 310 | 387 | 464 | mA | 1 |
| Power Supply Input Current | | 416 | 520 | 624 | mA | 2 |
| Dower Consumption | PLCD | | 4.64 | 5.57 | Watt | 1 |
| Power Consumption | PLCD | | 6.24 | 7.50 | Watt | 2 |
| Rush current | Irush | - | - | 3.0 | Α | 3 |

Note.

- 1. The specified current and power consumption are under the V_{LCD} =12.0V, 25 ± 2°C, f_V =60Hz condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.
- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power Input is 1ms(min.)

White: 255Gray Black: 0Gray

Mosaic Pattern(8 x 6)

| LED Junction Temperature | Tj | | | 150 | C | - | 7,8 | |

LED driver design guide

: The design of the LED driver must have specifications for the LED in LCD Assembly.

The performance of the LED in LCM, for example life time or brightness, is extremely influenced by the characteristics of the LED driver.

So all the parameters of an LED driver should be carefully designed and output current should be Constant current control.

Please control feedback current of each string individually to compensate the current variation among the strings of LEDs.

When you design or order the LED driver, please make sure unwanted lighting caused by the mismatch of the LED and the LED driver (no lighting, flicker, etc) never occurs.

When you confirm it, the LCD module should be operated in the same condition as installed in your instrument.

- 1. Specified values are for a single LED bar.
- 2. The specified current is input LED chip 100% duty current.
- 3. The specified voltage is input LED string and Bar voltage at typical 350mA 100% duty current.
- 4. The specified power consumption is input LED bar power consumption at typical 350mA 100% duty current.
- 5. The LED life time is determined as the time at which brightness of the LED is 70% compared to that of initial value at the typical LED current on condition of continuous operating at below junction temperature 90°C.
- 6. The LED power consumption shown above does not include loss of external driver.

The used LED BL current is the LED typical current.

String Power Consumption is calculated with $P_S = V_S \times 350 \text{mA}$

- BL Power Consumption is calculated with $P_{BL} = V_S \times 350 \text{mA} \times 2(\text{string no.})$
- 7. LED operating DC Forward Current and Junction Temperature must not exceed LED Max Ratings.
- 8. The LED life time and the maximum rating of LED junction temperature are evaluated at LED package level, not at liquid crystal module level.

3-2. Interface Connections

3-2-1. LCD Module

- LCD Connector(CN1):FI-X30SSL-HF (JAE), MDF76LBRW-30S-1H (Hirose) or Equivalent
- Mating Connector : FI-XC30C2L (Manufactured by JAE) or Equivalent

Table 3. MODULE CONNECTOR(CN1) PIN CONFIGURATION

| No | Symbol | Description | No | Symbol | Description |
|----|----------|---|----|----------|----------------------------------|
| 1 | DDC_SCL | DDC Clock | 16 | Lane3P | True Signal for Main Link 3 |
| 2 | DDC_SDA | DDC Data | 17 | Lane3N | Component Signal for Main Link 3 |
| 3 | GND | High Speed Ground for Auxiliary Channel | 18 | GND | High Speed Ground |
| 4 | AUX_CH_N | Component Signal for Auxiliary Channel | 19 | SPDIF | Audio output from DP RX |
| 5 | AUX_CH_P | True Signal for Auxiliary Channel | 20 | VIDEO_ON | Video status from DP RX |
| 6 | GND | High Speed Ground for Main Link 0 | 21 | HPD | Hot Plug Detect Signal |
| 7 | Lane0P | True Signal for Main Link 0 | 22 | GND | GND for main power |
| 8 | Lane0N | Component Signal for Main Link 0 | 23 | GND | GND for main power |
| 9 | GND | High Speed Ground for Main Link 1 | 24 | GND | GND for main power |
| 10 | Lane1P | True Signal for Main Link 1 | 25 | GND | GND for main power |
| 11 | Lane1N | Component Signal for Main Link 1 | 26 | VLCD | 12V for LCM main power |
| 12 | GND | High Speed Ground for Main Link 2 | 27 | VLCD | 12V for LCM main power |
| 13 | Lane2P | True Signal for Main Link 2 | 28 | VLCD | 12V for LCM main power |
| 14 | Lane2N | Component Signal for Main Link 2 | 29 | VLCD | 12V for LCM main power |
| 15 | GND | High Speed Ground for Main Link 3 | 30 | VSYNC | Sync. signal |

Note: 1. All GND(ground) pins should be connected together and to Vss which should also be connected to the LCD's metal frame.

2. All VLCD (power input) pins should be connected together.

[Figure 3] User Connector diagram

3-2-2. User Connector

This connector is used for synchronized LED Driver. FFC connector is 53780-8604. (Manufactured by MOLEX)

Table 4. LED SYNCHRONIZED CONNECTOR(CN3) PIN CONFIGURATION

| Pin | Symbol | Description | NOTES |
|-----|--------|---------------------------------|-------|
| 1 | GND | Ground | |
| 2 | EN | Enable | |
| 3 | PWM | PWM for synchronized LED Driver | 1 |
| 4 | GSP | GSP for synchronized LED Driver | 2 |

Note: 1. PWM signal follows multiplied Horizontal frequency and level is 3.3V TTL level.

2. GSP frequency follows refresh time and level is 3.3V TTL level and high width is 1/(Horizotal freq).

3-2-3. Backlight Interface

Driver connector: H401K-D06N-12B (Manufactured by E&T) Mating Connector: 4530K-F06N-01R (Manufactured by E&T)

Table 5. LED DRIVER CONNECTOR PIN CONFIGURATION

| Pin | Symbol | Description | NOTES |
|-----|--------|-----------------------------------|-------|
| 1 | LED1- | LED channel 1 cathode – Left bar | |
| 2 | LED2+ | LED channel 2 Anode – Left bar | |
| 3 | NC | NC | |
| 4 | LED1+ | LED channel 1 Anode – Right bar | |
| 5 | LED2- | LED channel 2 cathode – Right bar | |
| 6 | NC | NC | |

[Figure 4] LED Driver Connector Pin

3-3. Signal Timing Specifications

All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 6. TIMING TABLE

| ITEM | Symbol | Min | Тур | Max | Unit | Note | |
|------------|-----------|------|-----|-------|------|--------|--|
| DCLK | Period | tclk | - | 7.22 | - | ns | |
| DCLK | Frequency | - | - | 138.5 | - | MHz | |
| | total | thp | - | 2080 | - | tclk | |
| l | Frequency | fн | - | 66.59 | - | KHz | |
| Horizontal | Blanking | | - | 160 | - | tclk | |
| | valid | twн | - | 1920 | - | tclk/2 | |
| | total | tvp | - | 1111 | - | thp | |
| Vertical | Frequency | fv | - | 60 | - | Hz | |
| Vertical | Blanking | | - | 31 | - | thp | |
| | valid | twv | - | 1080 | - | thp | |

Note: Hsync period and Hsync width-active should be even number times of tCLK. If the value is odd number times of tCLK, display control signal can be asynchronous. In order to operate this LCM a Hsync, Vsync, and DE(data enable) signals should be used.

- 1. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 2. Vsync and Hsync should be keep the above specification.
- 3. Hsync Period, Hsync Width, and Horizontal Back Porch should by any times of character number(8).
- 4. The polarity of Hsync, Vsync is not restricted.

3-4. Signal Timing Waveforms

1. Dclk, DE, DATA waveforms

2. Horizontal waveform

3. Vertical waveform

3-5. Color Input Data Reference

The Brightness of each primary color(red,green,blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 7. COLOR DATA REFERENCE

| | | | | | | | | Input Color Data | | | | | | | | | | | | | | | | | | |
|----------------|-------------|------|----------|---|---|----|---|------------------|----|---|----|---|---|-----|----|---|------|---|---|---|---|----|----|---|----|-----|

3-6. Power Sequence

3-6-1. Power Sequence

Notes: [1] HPD is asserted high by Sink at power-up

- [2] SYMBOL_LOCK indicated by contents of Sink DPCD registers 00202h to 00205h
- [3] VIDEO_ON asserted high by Sink when video to panel is valid
- [6] BL_EN is an active-high MLB enable signal for panel BLU

Notes: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD V_{LCD} to 0V.
- 3. LED power must be turn on after power supply for LCD and interface signal are valid.

| Parameter | Min | Max | Units |
|-----------|------|------|-------|
| Т9 | 0 | 10 | ms |
| T10 | 0 | 5 | ms |
| T11 | - | 10 | ms |
| T12 | 0 | - | ms |
| T13 | 0.01 | 1000 | ms |
| T14 | 250 | - | ms |

Notes: [2] SYMBOL_LOCK indicated by contents of Sink DPCD registers 00202h to 00205h

- [4] Power-state set by Source in Sink DPCD register 00600h
- [5] VIDEO_ON asserted low by Sink because of:
 - 1) loss of SYMBOL_LOCK or
 - 2) DP Sink is powered down
- [7] BL_EN must be asserted low by system as rapidly as possible when video is invalid to avoid visible artifacts
- [8] T14 defines minimum off-time for 12V power
- [9] min. times of 0 indicate precedence ordering of events, e.g. where actual timing is TBD

3-6-2. State Machine

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' for approximately 70 minutes in a dark environment at 25 ± 2 °C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 ° and aperture 1 degree.

FIG. 8 presents additional information concerning the measurement equipment and method.

[Figure 5] Optical characteristic measurement equipment and method

Notes 1. Contrast Ratio(CR) is defined mathematically as:

Contrast Ratio =
$$\frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

It is measured at center point(Location P1)

2. Surface luminance(LWH)is luminance value at 5 points average across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 9. $L_{WH} = = Average[L_{on}1,L_{on}2,L_{on}3,L_{on}4,L_{on}5]$

3. The variation in surface luminance , δ WHITE is defined as :

$$\delta_{\textit{WHITE}} = \frac{\text{Maximum}(L_{\textit{on1}}, L_{\textit{on2}}, L_{\textit{on13}}) - \text{Minimum}(L_{\textit{on1}}, L_{\textit{on2}}, L_{\textit{on13}})}{\text{Average}(L_{\textit{on1}}, L_{\textit{on2}}, L_{\textit{on5}})} \times 100(\%)$$

Where L1 to L13 are the luminance with all pixels displaying white at 13 locations. For more information see FIG 9.

- 4. Response time is the time required for the display to transition from black to white (Rise Time, Tr_R) and from white to black (Decay Time, Tr_D). For additional information see FIG 10
- 5. Color shift is the angle at which the color difference is lower than 0.04. For more information see FIG 11.
 - Color difference (Δu'v')

$$u' = \frac{4x}{-2x+12y+3} \qquad v' = \frac{9y}{-2x+12y+3}$$

$$\Delta u'v' = \sqrt{(u'_1 - u'_2)^2 + (v'_1 - v'_2)^2}$$

 $\Delta u'v' = \sqrt{(u'_1 - u'_2)^2 + (v'_1 - v'_2)^2} \qquad \qquad \text{u'1, v'1 : u'v' value at viewing angle direction} \\ u'2, v'2 : u'v' \text{ value at front } (\theta = 0)$

- Pattern size: 25% Box size
- Viewing angle direction of color shift: Horizontal, Vertical
- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 12.
- 7. Effective viewing angle is the angle at which the gamma shift of gray scale is lower than 0.3. For more information see FIG 13 and FIG 14.
- 8. Gray scale specification Gamma Value is approximately 2.2. For more information see Table 10.

Measuring point for surface luminance & measuring point for luminance variation.

[FIG 6] Measure Point for Luminance

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[FIG 7] Response Time

Color shift is defined as the following test pattern and color.

25% Box size

[FIG 8] Test Pattern

Average RGB values in Bruce RGB for Macbeth Chart

Dimension of viewing angle range.

[FIG 9] Viewing angle

[FIG 10] Sample Luminance vs. gray scale (using a 256 bit gray scale)

$$L = aV^r + L_b$$

[FIG 11] Sample Log-log plot of luminance vs. gray scale

$$\log(L - L_b) = r \log(V) + \log(a)$$

Here the Parameter α and γ relate the signal level V to the luminance L.

The GAMMA we calculate from the log-log representation (FIG. 11)

Table 9. Gray Scale Specification

| Gray Level | Relative Luminance [%] (Typ.) |
|------------|-------------------------------|
| 0 | 0.10 |
| 31 | 1.08 |
| 63 | 4.71 |
| 95 | 11.5 |
| 127 | 21.7 |
| 159 | 35.5 |

| 223 | 74.5 |
| 255 | 100 |

5. Mechanical Characteristics

The contents provide general mechanical characteristics. In addition the figures in the next page are detailed mechanical drawing of the LCD.

| | Horizontal | 495.6mm | |
|---------------------|---|----------|--|
| Outline Dimension | Vertical | 305.25mm | |
| | Depth | 14.8mm | |
| De-el Avec | Horizontal | 479.84mm | |
| Bezel Area | Vertical | 272.32mm | |
| Astina Disalan Anas | Horizontal | 475.2mm | |
| Active Display Area | Vertical | 267.3mm | |
| Weight | 2100g (Typ.) | | |
| Surface Treatment | Hard coating(2H) Glare, Low Reflection treatment of the front polarizer | | |

Notes: Please refer to a mechanic drawing in terms of tolerance at the next page.

<FRONT VIEW>

<REAR VIEW>

Notes

- 1. Unspecified tolerances are to be ±0.5mm.
- Till and partial disposition tolerance of display area are following.
- (1) Y-direction :IA-BI≤ 1.0mm
- (2) X-direction :IC-DI≤ 1.0mm

- 3. Unspecified contents have to be discussed with designer
- 4. Tarque Spec of User Mounting: 7.0 ~ 8.0kgf cm
- 5. LCM Weight: 2.1kg (Typ.) . 2.2kg (Max.)
- 6. The ass'y should have no defect in appearance.
- 7. LCM Flotness spec 1 Mox 0.5mm
 - Measuring method: The gap is less than 0.5 from the flat surface plate to front side.

6. Reliability

Environment test condition

| No | Test Item | Condition | | | | |
|----|-----------------------------------|---|--|--|--|--|
| 1 | High temperature storage test | Ta= 60°C 240h | | | | |
| 2 | Low temperature storage test | Ta= -20°C 240h | | | | |
| 3 | High temperature operation test | Ta= 50°C 50%RH 240h | | | | |
| 4 | Low temperature operation test | Ta= 0°C 240h | | | | |
| 5 | Vibration test (non-operating) | Wave form: random Vibration level: 1.0G RMS Bandwidth: 10-300Hz Duration: X,Y,Z, 20 min One time each direction | | | | |
| 6 | Shock test (non-operating) | Shock level : 120G Waveform : half sine wave, 2ms Direction : \pm X, \pm Y, \pm Z One time each direction | | | | |
| 7 | Humidity condition Operation | Ta= 40 °C ,90%RH | | | | |
| 8 | Altitude storage / shipment | 0 - 40,000 feet(12,192m) | | | | |

7. International Standards

7-1. Safety

- a) UL 60950-1, Second Edition, Underwriters Laboratories Inc.
 Information Technology Equipment Safety Part 1: General Requirements.
- b) CAN/CSA C22.2 No.60950-1-07, Second Edition, Canadian Standards Association. Information Technology Equipment Safety Part 1: General Requirements.
- c) EN 60950-1:2006 + A11:2009, European Committee for Electrotechnical Standardization (CENELEC). Information Technology Equipment Safety Part 1 : General Requirements.
- d) IEC 60950-1:2005, Second Edition, The International Electrotechnical Commission (IEC). Information Technology Equipment - Safety - Part 1 : General Requirements. (Including report of IEC60825-1:2001 clause 8 and clause 9)

Notes

1. Laser (LED Backlight) Information

Class 1M LED Product IEC60825-1: 2001 Embedded LED Power (Class1M) Power: 5.6602 mW (Max.) Wavelength: 453 (nm) Width: 1.0 x 1.0 (mm)

2. Caution

: LED inside.

Class 1M laser (LEDs) radiation when open.

Do not open while operating.

7-2. EMC

- a) ANSI C63.4 "American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz." American National Standards Institute (ANSI), 2003.
- b) CISPR 22 "Information technology equipment Radio disturbance characteristics Limit and methods of measurement." International Special Committee on Radio Interference (CISPR), 2005.

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

8-2. Packing Form

a) Package quantity in one box: 7pcs

b) Box Size: 360 * 310 * 562 (mm)

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
 Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200$ mV(Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In higher temperature, it becomes lower.)

 And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

10. EDID DATA FOR LM215WF3-SDB1
