## Product Specification

### 1. General Description

The LP101WH4 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally Black mode. This TFT-LCD has 10.1 inches diagonally measured active display area with HD resolution(1366 horizontal by 768 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,777,216 colors. The LP101WH4 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP101WH4 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP101WH4 characteristics provide an excellent flat display

### General Features

Active Screen Size	10.1 inches diagonal
Outline Dimension	232.8±0.3 (H) × 138.15±0.3 (V) × 2.40 mm (max.)
Pixel Pitch	0.16290 mm × 0.16290 mm
Pixel Format	1366 horiz. by 768 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	400(TBD) cd/m <sup>2</sup> (Typ)
Power Consumption	Logic : 0.55(TBD) W(typ.@Mosaic), Back Light : 2.1(TBD)W (typ.@ I <sub>LED</sub> = 17.5mA)
Weight	125g (Max., LCM only)
Display Operating Mode	Transmissive mode, normally Black
Surface Treatment	Anti-Glare treatment (3H) of the front polarizer

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage	VCC	-0.3	4.0	V <sub>DC</sub>	at 25 ± 5°C
Operating Temperature	T <sub>OP</sub>	0	50	°C	1
Storage Temperature	HST	-20	60	°C	1
Operating Ambient Humidity	H <sub>OP</sub>	10	90	%RH	1
Storage Humidity	HST	10	90	%RH	1

Note : 1. Temperature and relative humidity range are shown in the figure below.  
Wet bulb temperature should be 39°C Max, and no condensation of water.

## Product Specification

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP101WH (TBD) requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the LED BL.

**Table 2. ELECTRICAL CHARACTERISTICS**

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
LOGIC :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V <sub>DC</sub>	1
Power Supply Input Current	I <sub>CC</sub> Mosaic	-	166	194	mA	2
Power Consumption	P <sub>c</sub>	-	0.55	0.64	Watt	2
Power Supply Inrush Current	I <sub>CC_P</sub>	-	-	2000	mA	4
Differential Impedance	Z <sub>m</sub>	90	100	110	Ohm	5
EDID Input Voltage	V <sub>EDID</sub>	3.0	3.3	3.6	V	
EDID Input Current	I <sub>EDID</sub>			10	mA	6
LED Backlight : (with LED Driver)						
LED Driver input Voltage	VLED	7	12	21	V	7
Operating Current per string	I <sub>LED</sub>		17.5		mA	8
LED Power Consumption	P <sub>LED</sub>		2.1	2.15	W	9
PWM Duty Ratio		5		100	%	10
PWM Jitter			-	0.3	%	11
PWM Frequency	F <sub>PWM</sub>	200		1,000	Hz	12
PWM High Level Voltage	V <sub>PWM_H</sub>	2.1			V	
PWM Low Level Voltage	V <sub>PWM_L</sub>			0.8	V	
LED_EN High Voltage	V <sub>EN_H</sub>	2.1			V	
Life Time		12,000	-	-	Hrs	13

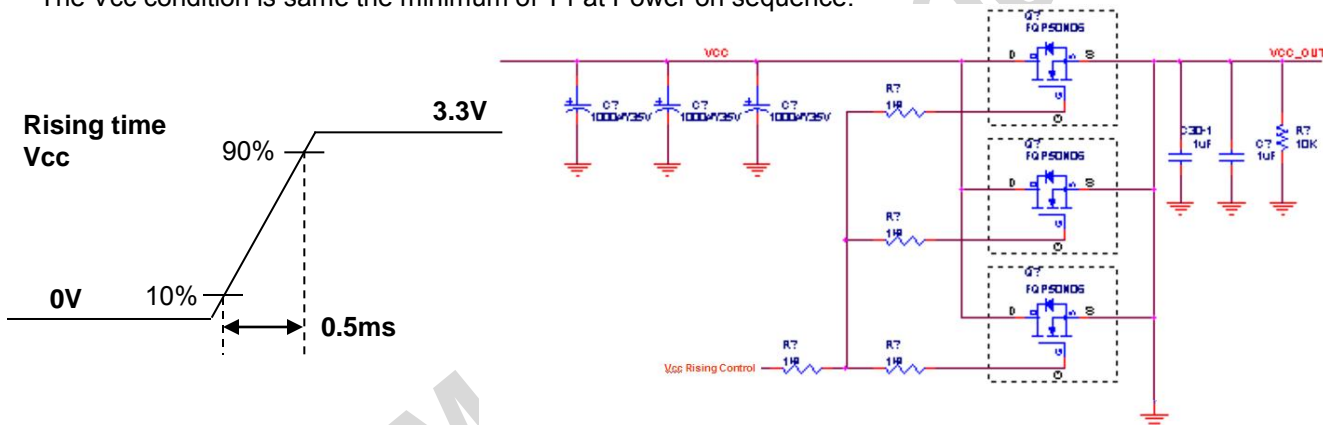

## Product Specification

Note)

1. The measuring position is the connector of LCM and the test conditions are under  $25^{\circ}\text{C}$ ,  $f_v = 60\text{Hz}$ , Mosaic pattern.
2. The specified  $I_{CC}$  current and power consumption are under the  $V_{CC} = 3.3\text{V}$ ,  $25^{\circ}\text{C}$ ,  $f_v = 60\text{Hz}$  condition whereas Mosaic pattern is displayed and  $f_v$  is the frame frequency.

3. This Spec. is the max load condition for the cable impedance designing.
4. The below figures are the measuring  $V_{CC}$  condition and the  $V_{CC}$  control block LGD used.  
The  $V_{CC}$  condition is same the minimum of T1 at Power on sequence.

5. This impedance value is needed to proper display and measured form LVDS Tx to the mating connector.
6. The specified  $I_{EDID}$  current are under the  $V_{CC} = 3.3\text{V}$  @ frequency =  $330\text{KHz}$  condition.
7. The measuring position is the connector of LCM and the test conditions are under  $25^{\circ}\text{C}$ .
8. The current and power consumption with LED Driver are under the  $V_{LED} = 12.0\text{V}$ ,  $25^{\circ}\text{C}$ , Dimming of Max luminance whereas White pattern is displayed and  $f_v$  is the frame frequency.
9. The below figures are the measuring  $V_{LED}$  condition and the  $V_{LED}$  control block LGD used.  
 $V_{LED}$  control block is same with  $V_{CC}$  control block.

10. The operation of LED Driver below minimum dimming ratio may cause F.O.S or reliability issue.
11. If Jitter of PWM is bigger than maximum. It may cause flickering.
12. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
13. The life time is determined as the time at which the typical brightness of LCD is 50% compare to that of initial value at the typical LED current.

Product Specification

### 3-2. Interface Connections

This LCD employs two interface connections, a 40pin connector is used for the module electronics interface and the other connector is used for the integral backlight system.

The electronics interface connector is a model 20474-040E-12 manufactured by I-PEX.

**Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)**

Pin	Symbol	Description	Notes
1	NC	No Connection	<p><b>[Connector]</b> 20474-040E-12, 40pin</p> <p><b>[Connector pin arrangement]</b></p>  <p>[LCD Module Rear View]</p>

### 3-4. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of LVDS Tx/Rx for its proper operation.

**Table 5. TIMING TABLE**

ITEM	Symbol	Min	Typ	Max	Unit	Note
DCLK	Frequency	$f_{CLK}$	-	72	-	MHz
Hsync	Period	$t_{HP}$	1470	1520	1576	Tclk
	Width	$t_{WH}$	23	32	40	
	Width-Active	$t_{WHA}$		1366		
Vsync	Period	$t_{VP}$	779	790	801	tHP
	Width	$t_{VW}$	2	5	8	
	Width-Active	$t_{VWA}$		768		
Data Enable	Horizontal back porch	$t_{HBP}$	72	80	128	tCLK
	Horizontal front porch	$t_{HFP}$	8	48	48	
	Vertical back porch	$t_{VBP}$	8	14	20	tHP
	Vertical front porch	$t_{VFP}$	1	3	5	

### 3-5. Signal Timing Waveforms

Condition : VCC = 3.3V

## Product Specification

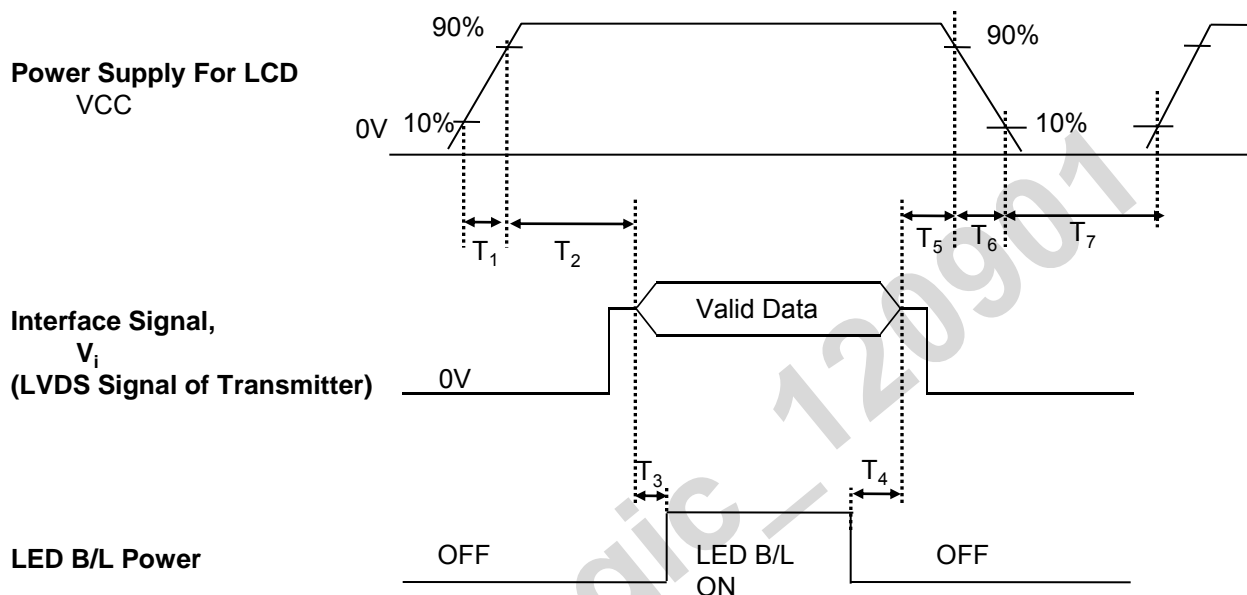

### 3-6. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 7. COLOR DATA REFERENCE**

Color		Input Color Data																	
		RED						GREEN						BLUE					
		MSB			LSB			MSB			LSB			MSB			LSB		
		R 5	R 4	R 3	R 2	R 1	R 0	G 5	G 4	G 3	G 2	G 1	G 0	B 5	B 4	B 3	B 2	B 1	B 0

### 3-7. Power Sequence

**Table 8. POWER SEQUENCE TABLE**

Parameter	Value			Units
	Min.	Typ.	Max.	
T <sub>1</sub>	0.5	-	10	(ms)
T <sub>2</sub>	0	-	50	(ms)
T <sub>3</sub>	200	-	-	(ms)
T <sub>4</sub>	200	-	-	(ms)
T <sub>5</sub>	0	-	50	(ms)
T <sub>6</sub>	0	-	10	(ms)
T <sub>7</sub>	400	-	-	(ms)

Note)

1. Valid Data is Data to meet "3-3. Signal Timing Specifications"
2. Please avoid floating state of interface signal at invalid period.
3. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
4. LED B/L power must be turn on after power supply for LCD and interface signal are valid.

## Product Specification

### 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

**Table 9. OPTICAL CHARACTERISTICS**  $T_a=25^\circ\text{C}$ ,  $V_{CC}=3.3\text{V}$ ,  $f_v=60\text{Hz}$ ,  $f_{CLK}=72(\text{TBD})\text{MHz}$ ,  $I_{LED}=17.5\text{mA}$

Parameter		Symbol	Condition	Min	Typ	Max	Units	Notes
Average Luminance		LAVE	5 Points (ILED= 17.5mA)	340	400	-	cd/m²	2
Luminance variation		$\delta_{\text{WHITE}}$	5points	-	1.20	1.40		
			13 point	-	1.40	1.60		3
C/R		-	Center 1 Point	500	800	-	-	1
Response time			-	-	25	-	ms	4
Viewing angle	Horizontal	$\Theta$	$\phi x(\text{Left,Right})$	$\pm 80$	$\pm 85$	-	°	5

Gray Scale			-		Gamma 2.2			6

## Product Specification

Note)

1. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 1.

$$L_{WH} = \text{Average}(L_1, L_2, \dots L_5)$$

3. The variation in surface luminance , The panel total variation ( $\delta_{WHITE}$ ) is determined by measuring  $L_N$  at each test position 1 through 17 and then defined as followed numerical formula.  
For more information see FIG 2.

$$\delta_{WHITE} = \frac{\text{Maximum}(L_1, L_2, \dots L_{13})}{\text{Minimum}(L_1, L_2, \dots L_{13})}$$

4. Response time is the time required for the display to transition from white to black (rise time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.
5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

\*  $f_v = 60\text{Hz}$

Gray Level	Luminance [%] (Typ)
L0	TBD
L7	TBD
L15	TBD
L23	TBD
L31	TBD
L39	TBD
L47	TBD
L55	TBD
L63	TBD

Product Specification

FIG. 2 Luminance

<Measuring point for Average Luminance & measuring point for Luminance variation>

FIG. 3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

FIG. 4 Viewing angle

## Product Specification

**FIG. 5 Cross talk**

No visual cross-talk will be allowed. Two luminance values are measured at center spot with 50 x 50 pixels. The cross-talk,  $D_{SHA}$ , is defined as,

$$D_{SHA} = (L_B - L_A) / L_B \cdot 100\%,$$

Where,  $L_A$  = Luminance in Pattern A

$L_B$  = Luminance in Pattern B.

Pattern A  
Gray Scale = 31 in center  
Black in surrounding area

Pattern B  
Gray Scale = 31 full screen

## 5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LP101WH (TBD). In addition the figures in the next page are detailed mechanical drawing of the LCD.

Outline Dimension	Horizontal	232.8 ± 0.3mm (without bracket length)
	Vertical	138.15 ± 0.3mm (without bracket length)
	Thickness	2.40mm (max.)
Bezel Area	Horizontal	TBD
	Vertical	TBD
Active Display Area	Horizontal	222.5214mm
	Vertical	125.1072mm
Weight	125g (Max.) w/o Touch	
Surface Treatment	LCD : Glare, low reflective treatment of the front polarizer, 2H

a) Package quantity in one box : TDB pcs

b) Box Size : TDB

## 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.  
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
