Units supplied in tape & reel packaging; 250 parts on 13" diameter reel.

Mechanical Diagrams

²⁾ Irms Amperes for approximately ΔT of 40°C. DC current for an approximate ΔT of 40°C without core loss. Derating is necessary for AC currents. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.

³⁾ Isat Amperes Peak for approximately 30% rolloff @ 20°C

⁴⁾ Applied Volt-Time product (V-µS) across the inductor. This value represents the applied V-µS at 200kHz necessary to generate a core loss equal to 10% of the total losses for 40°C temperature rise. See Core Loss Graph.
